

Professional summary

I'm an indie developer specialized in building projects from scratch to deployed apps on the App Store! Thanks to my two-year training at the Apple Developer Academy, I've been exposed to concepts such as writing secure code, unit testing, and managing the full life cycle of an app: from deployment to post-launch maintenance, including user retention and ongoing App Store Optimization through analytics monitoring and product page iteration. I'm a compeller storyteller who likes to give back to the community my learnings when I explore new ways of building ideas by writing articles.

Experience

- Developer · Apple Developer Academy, ARTE (Advanced Research Track Experience)

09/2025 - 06/2026

Collaboration with the Cardiology Department of the Polyclinic of Naples. Developed and deployed an open-source pre-operative meeting XR workspace for visionOS. Worked in a 6-people team following Agile methodology (two-weeks sprints). Covered Scrum Master role (servant-leader approach) optimizing teamwork and dynamics.
- Mentor · "Cognitive Artifact Design and Prototyping Tools" course

UNIVERSITÀ SUOR ORSOLA BENINCASA, NAPLES09/2023 - 02/2025

Offered support and shared pratical coding expertise. Provided constructive feedback on presentation performances to boost audience engagement. Advised how to craft narratives with strong storytelling and coached public speaking tailoring confident body language and stage presence.
- Mentor · "Artificial Intelligence and Affective Computing" course

UNIVERSITÀ SUOR ORSOLA BENINCASA, NAPLES10/2023 - 02/2024

Provided guidance in the understanding of the foundation of Large Language Models AI systems, their architecture and training process. Broke down the fundamentals of generative AI for image creation, its limitations and creative possibilities. Led interactive workshops on effective prompt engineering.
- Internship · Artificial Intelligence and Human Emotions

UNIVERSITÀ SUOR ORSOLA BENINCASA, NAPLES12/2022 - 03/2024

Developed graphical user interfaces (GUIs) in Python that allowed connection to AI image generator APIs. Explored and researched how the generation of such images could be prompted and tailored by human emotions emerging during an artistic performance.

Projects

- ATRIA - Heart Team Meetings · visionOS, macOS

09/2025 - 06/2026

Open-source app to perform interactive spatial pre-operatory meetings with shared DICOM file visualization. Spatial accessory implementation (stylus), unit testing, MV architecture, multi-platform deployment (macOS companion for custom medical package creation). RealityKit and ARKit for spatial annotations, SharePlay and GroupActivities for shared medical data visualization.
- Whoooshh · visionOS, iOS

04/2026 - 06/2026

Collaborative spatial drawing app: immersive and 2D drawing types. MV architecture, multi-platform deployment (companion iOS app to upload a custom picture). SharePlay and GroupActivities framework for shared drawings. RealityKit and ARkit for drawing strokes.
- Roundeo · macOS

12/2025 - 01/2026

Open-source tool to round the corners of any video and composite a PNG device frame on top in order to create professional-looking app previews. MVVM architecture. CoreImage and AVFoundation for video data and overlay.
- Liquid · iOS

12/2025 - 03/2026

Cash-payment support for dyscalculic people, both when paying and when receiving spare change for USD, EUR and YEN, hand-drawn assets. AI support on user's budget. MVVM architecture. FoundationModels framework.
- Gennit · iOS

03/2026

An app for planning inclusive food gatherings where guests can share their dietary restrictions with the host ahead of the event. MVVM architecture, freemium model. CloudKit for native iOS infrastructure, StoreKit for payments.
- Detective Dino · iOS

11/2025

An experimental game where the player has to solve an AI generated crime story by prompting details such as place, time, weather, year and weapon of the crime. MVVM architecture. FoundationModels framework.

Airchestra • visionOS	09/2025 - 11/2025
Spatial sound experience of floating 3D musical planets in immersive space. 10-people team collaboration. MV architecture. RealityKit and ARKit for spatial placement of entities (sound sources and 3D models).	
NeglectRehab • iOS	05/2025
A reference proposal for an XR-based rehabilitation framework addressing Unilateral Spatial Neglect in patients with right hemisphere brain lesions.	
Duidu • iPadOS	04/2025 - 06/2025
Accessible drawing canvas for visually impaired people where drawing strokes are mapped by spatial sound and vibration. Focus on coding an accessible app. MVVM architecture. AVFoundation for sound, PencilKit for drawing.	
Nowhat • iOS	02/2025 - 04/2025
Quick note-taking app with priority list and drawing capabilities. Currently reshaping it into a collaborative project management tool for teams. Multi-language localization. MVVM architecture. PencilKit and SwiftData frameworks.	
PlantGogh • Android, Arduino	10/2021 - 06/2022
An Arduino board that gathers data from light and temperature sensors, integrates them with a plant's bioelectrical signals, and sends everything to a generative AI to create an image whose characteristics reflect the signals captured. Python and C++, API integration with DreamStudio. Bridge between Arduino board, Android app and API.	

Education

Developer • Apple Developer Academy	09/2024 - 06/2025
Hands-on development on Apple’s devices ecosystem. 9-months learning experience on Swift coding, designing apps that follow Apple’s Human Interface Guidelines, Accessibility and Entrepreneurial fundamentals.	
Master’s Degree • Cognitive Neurosciences • 110/110 CUM LAUDE	11/2021 - 05/2024
Studied the scientific neural foundations of sensation and perception, developing research skills through a full experimental thesis: “On the Functional Brain Networks involved in Phisical Understanding”.	
Apple Foundation Program	09/2023 - 09/2023
One-month intensive course providing a first foundation in iOS app development, covering both coding and design from concept to prototype.	
Bachelor’s Degree • Psychological Sciences and Techniques • 105/110	09/2016 - 10/2021
Humanistically oriented psychology program covering psychoanalysis, developmental psychology, and foundational statistical methods for data analysis. Graduated with a thesis on “Cognitive Biases during Statistical Thinking”.	

Conferences and talks performed

Conference • Advances and Controversies in Cardiovascular Diseases HOTEL HABITA, POMPEI	06/2026
Invited as an AI expert in a medical roundtable alongside cardiac doctors, engineers and medical students, contributing to a debate on the potential role of AI in supporting clinical diagnosis.	
Talk • Plants and AI project presentation LIBERA UNIVERSITÀ DI LINGUE E COMUNICAZIONE IULM, MILAN	03/2023
Presented a personal creative project to a cohort of university students: a prototype generating AI images whose visual output responds to a plant's bioelectric signals, ambient temperature, and light levels.	

Other experiences

Mentor • Apple Foundation Program UNIVERSITÀ SUOR ORSOLA BENINCASA, NAPLES	02/2026
Provided one-day coaching to students on code syntax and structure. Proposed Swift framework	
Mentor • Apple Foundation Program APPLE DEVELOPER ACADEMY, NAPLES	12/2025
Assisted a team of students in the development of an iOS app. Offered support during the ideation process with brainstorming techniques and mindset suggestions. Explained how to develop interfaces and user experience compliant with Apple’s Human Interfaces Guidelines. Deployed the prototype on TestFlight.	
Hackathon win • Consorzio Clara- Cisco: “Data availability for America’s Cup” THE BIG HACK 2025, NAPLES	06/2025
Developed a system using Cisco’s webcams network to optimize routing toward the points of interest of the America’s Cup and avoid crowded places in order to improve the accessibility of the event.
